

Client Type: Business Systems

The Challenge: Many large corporations have a difficult time managing benefits offered to their employees. Often, these companies will outsource these services to third party vendors, but that comes with a rather large investment. The client wanted to develop a software application that it could market to these large corporations, in order to eliminate their need for outsourcing benefit offerings.

The Solution Provided: InfoTech developed a complex Web-based information system that provides benefits administration capabilities for client companies. Benefits consist of life insurance, medical care (vision, dental etc.) and others, which each employee can choose based on individual eligibility.

Current Status: The project was completed and delivered, and is currently maintained by InfoTech.

Technical Solutions Implemented:

1. Microsoft SQL Server 2008
2. Microsoft SQL Server 2008 - Reporting Services
3. Microsoft SQL Server 2008 - Analysis Services
4. Microsoft LinQ
5. ASP.NET
6. Ajax
7. C#
